 1. A single strand of spaghetti is called a spaghetto, dropping the 'l', and adding the 'o' ending in Italian makes it a singular form. The same rule applies to Raviolo, Cannolo, and Gnoccho.
 2. A day on Venus is longer than a year on Earth. Just think, you could retire in 70 days.
 3. Honey never spoils. Archaeologists have found edible honey in ancient tombs. I bet the intern had to sample it for that observation.
 4. At the deepest point in the ocean, the pressure is equivalent to an elephant standing on your big toe – yet numerous fish species survive in this dark world.
 5. The beautiful white sand on tropical beaches is largely the result of the excrement of Parrotfish that feed on coral.
 6. Some shark species will drown and die if they stop swimming for even a minute, because they need the flow of water to breathe.
 7. Ticks don't jump or fly – they wait on grass or plants and climb onto animals or people as they pass by. Ticks can carry diseases like Lyme disease. Early detection and removal are important.
 8. There are an estimated 10 quintillion insects alive on Earth right now – that's 1.4 billion for every human. Watch that bug you squash... we're out-numbered BIG TIME!
 9. A flea can jump over 150 times its own body length – the equivalent of a human leaping over a skyscraper.
 10. A housefly tastes everything it lands on – including you – because its taste buds are on its feet.
